

# FLOAT PENDANT

Inspired by Japanese fishing floats and how a ripping tide pulls lobster buoys partially under water, the Float Pendant is an exploration in material and movement. Cylinders of borosilicate glass are joined by our expert glass blowers to create an internal optic and exterior shade. Sandblasted for diffusion, the exterior glass shell dissolves to clear where the ends are fused to the center optic. A cloth covered electrical cord provides power for the pendants while the angle of suspension can be adjusted by moving the knotted rope along the cloth cord. Available in single, double, or triple clusters the Float Pendant comes complete with brass and leather ceiling hardware that allows the fixtures to be swung over to bring light to where you need it.
